

# Tobacco Mosaic

## Cause:

virus

## Symptoms:

Small patches of light green, brown and yellow appear on the leaves.

Leaves are smaller than usual, and this affects the rate at which the plant can photosynthesise. Consequently, the plant fails to thrive.

## How It Is Transmitted:

The disease is spread by human contact from plant to plant.

## Treatment and Prevention:

Remove all decaying leaves from the plant.

Burn any leaves suspected of suffering from Tobacco Mosaic to prevent further contamination.
